(54) Device for the height-adjustable fixing and support of internal anatomical organs.

(57) The device comprises a chamber having elastic properties, intended to contain a variable amount of fluid, in order to effect an increase or decrease in its volume in an adjustable manner, the said chamber being able to be incorporated in an anatomical region suitable for its fixing, and a deformable part of the chamber being linked by means of high strength thread-like ele-

ments to the anatomical organs which it is desired to secure adjustably. The chamber is linked by means of a tube to a subcutaneous capsule intended to be located close to the skin of the patient and which is capable of permitting the introduction or extraction of the liquid by means of a hypodermic needle.
